

Seattle Public Utilities is working on a city-wide effort to improve the health of our waterways by reducing combined sewer overflows. During heavy rains, the combination of stormwater (about 90 percent of the volume) and sewage may exceed the capacity of the sewage system and overflow into our waterways – causing a combined sewer overflow (CSO). Reducing combined sewer overflows will protect Lake Washington and make sure Seattle complies with federal and state water quality regulations.

Seattle Public Utilities has identified a CSO reduction project in your neighborhood and we'd like to tell you more about it. The current project would begin construction in 2012 - 2013, and community-wide project meetings are planned in September. Before then, we'd like to provide additional information to those closest to the project area, and give you the opportunity to ask questions and provide feedback.

INVITATION	
GENESEE PARK NEIGHBORS ASSOCIATION BRIEFING	
<b>Project:</b>	<b>Genesee Basin CSO Reduction project</b>
<b>Date/Time:</b>	Thursday, August 26 <sup>th</sup> 6:30 – 7:30 p.m.
